

IVES®

Power transfer pivots

Overview

Ives offers electrified intermediate power transfer pivots and electrified pocket pivots to transfer power and signals from the frame to the door. Pivots are generally used on heavier exterior door applications.

Power transfer pivots integrate seamlessly with your access control system and your door mounted electrified hardware.

The Ives electrified offering comes standard with Allegion Connect, a quick and easy way to connect power sources for the entire opening. With no wire cutting needed, you can reduce installation and maintenance time, ultimately cutting cost. After installation, Allegion Connect continues to provide benefits throughout the lifetime of the opening by offering a comprehensive service kit.
